Message from the Dean

I am very pleased to welcome you to the Faculty of Information Technology and Computer Science (FIT) in Sinai University (SU). We are one of the leading providers of computing education in Egypt. Moreover, we are also a leading destination for students from some of the neighboring countries. In FIT you will find exciting programs in a truly high-tech environment with world-class staff members. The overall mission of our faculty is to develop professionals who can manage professionally, ethically, sensitively and holistically in a range of organizations in an increasingly global and rapidly changing environment. Our graduates can be found in almost all types of business, industrial, academic, community and professional life. In addition to this, some of them have become successful entrepreneurs and successful businessmen. FIT has three departments: Computer Science and Software Engineering, Information Technology, and, Information and Decision Support Systems. .

FIT is very active in research and enhancement projects both locally and internationally. FIT has a collaboration agreement with Helwan University (HU) to offer mutually their postgraduate programs leading to Master and Doctorate degrees. We have also collaboration with Ahram Canadian University (ACU) to implement a joint Master degree. Moreover, FIT has already MOU with a prestigious German university to implement their academic programs in the near future, inshaALLAH.

I am confident that you have made the right choice by joining FIT, and hope you will enjoy your program of study and find the experience both rewarding and valuable to your future aspirations.

Again, welcome to FIT and have a successful study.

Professor A. Sharaf Eldin
Dean,

Faculty of Information Technology and Computer Science
(FIT),

Vision

FIT vision is to be a leader in Computing education and research and to provide a distinct community services.

Mission

The mission of FIT is to prepare computing graduates who are competent in the local and regional markets as well as to serve the local community of north Sinai.

Why study Computing in Sinai University?

The BSc degree in Computing from FIT will provide you with a thorough understanding of the key principles of computing and provide you with highly sought after skills such as programming, system analysis, software engineering, and project experience, which you will gain when working on both individual and group projects. We recognize the skills that employers are looking for and ensure you are equipped with the knowledge and experience to embark on a successful computer-based career. One of the key points in FIT programs is the diversity of these programs. Perhaps we are among the very few universities which offer a major and minor in their programs. This, in turn, opens the door for a series of specializations which cannot be found in similar universities like: e-learning, digital enterprise, e-business, business informatics, and digital media.

Information Technology Program (IT)

Credit Hours: 144

Program Objectives

The field of Information Technology (IT) is a multi-faceted one with exciting job prospects. By choosing IT at FIT, you will be able to achieve excellence in the design and implementation of computer networks, web development, and multi-media systems. You will also gain industry recognized experience in industry known certifications such as Cisco's CCNA. Practical hands-on experiments in our modern labs are used to illustrate the application of theory and concepts

Program Outcomes

Knowledge and Understanding: On completion of this program the student will be able to:

- a1. Comprehend the components of multimedia systems, computer and communication networks, mobile communication systems, pattern recognition systems, cryptography and network security systems
- a2. Demonstrate an understanding of the fundamental concepts related to the design and development of web-based and internet-based systems.
- a3. Explain the various issues of quality, reliability, and human factors related to the broad context of IT systems and their use in various domains.
- a4. Demonstrate an understanding of the fundamental concepts, tools, and techniques used for processing various multimedia information.

Cognitive skills: On completion of this program the student will be able to:

- b1. Apply analytical skills to the solution of computer-based problems.
- b2. Select from an extensive range of computer-based, mathematical and

analytical methods as appropriate to solve particular design or developmental problems.

b3. Select appropriate software and/or hardware components or processes in order to satisfy particular sets of requirements and objective constraints

b4. Engage effectively in tasks requiring initial problem identification and to effectively apply relevant fundamental principles and techniques appropriate to the analysis and solution of a range of technical problems.

Practical skills: On completion of the program the student will be able to:

c1. Apply sound principles to the construction and maintenance of computer-based systems

c2. Evaluate the efficiency and effectiveness of IT solutions using appropriate techniques.

c3. Develop and analyze IT solutions using appropriate tools and techniques.

c4. Evaluate IT systems in terms of general quality attributes and possible tradeoffs presented within the given case.

General and Transferable Skills: On completion of this program the student will be able to:

d1. Work effectively both autonomously in independent project-oriented activity, and co-operatively as a member of a group or project-team and manage time and other resources.

d2. Communicate effectively and explain complex technical information, concepts, arguments, design, information effectively, using a variety of media, and wide range of methods appropriate to a given type of audience or communication objective.

d3. Edit and review a professional report or document and design its storage, distribution and retention standards.

Computer Science and Software

Engineering Program (CSSE)

Credit Hours: 144

Program Objectives

The CSSE program aims to equip students with knowledge of the foundations of computer science and the skills necessary to apply their discipline to real-world problems. You will find many of our courses provide a diverse and engaging approach to teaching and learning, including project-based activities in all years, invited speakers and access to leading edge technologies in a range of dedicated labs throughout the campus.

Program Outcomes

Knowledge and Understanding: On completion of this program the student will have knowledge and understanding of:

a1. A range of underlying theories relevant to computer science.

a2. The process of systems development.

a3. The interaction between technology and society, and the role of computer professionals within this.

a4. A range of specialized topics within Computer Science.

Cognitive skills: On completion of this program the student will be able to:

b1. Apply analytical skills to the solution of computer-based problems.

b2. Critically evaluate computer-based solutions using a range of techniques.

b3. Construct abstract representations through the use of appropriate analysis and modeling techniques.

b4. Apply design principles to practical problems.

Practical skills: On completion of the program the student will be able to:

- c1. Apply sound principles to the construction and maintenance of computer-related artifacts.
- c2. Verify and validate computer-based systems.
- c3. Apply appropriate theories to the design and evaluation of systems.
- c4. Adapt and apply their knowledge and skills to mastering new technical areas.

General and Transferable Skills: On completion of this program the student will be able to:

- d1. Work effectively as a member of a software development team.
- d2. Communicate effectively in a variety of modes, including mathematics where appropriate.
- d3. Learn independently in a variety of situations, making use of available resources

Information and Decision Support Systems Program (IDSS)

Credit Hours: 144

Program Objectives

The program's objectives are underpinned by the following: key principles of business information systems; the importance of

information in all modern organizations and the strategic value of information systems within a global business context; the pivotal role of information and communication technologies in information systems, and the key role of people in designing, managing and using these systems. The program aims to provide students with an understanding of the advantages of aligning information systems with different organizational and business goals, and with various strategic and operational activities. Students will learn how to use a range of technical skills and methods, both for managing data, and for developing information systems, in response to different business problems and to different needs. The programme aims to promote independent learning and continuous professional development amongst its graduates. Graduates of the programme will be equipped with the professional and employability skills that will enable them to pursue a successful future career in this field.

Program Outcomes

- Knowledge and Understanding: On completion of this program the student will have knowledge and understanding of:

- a1. How businesses work in a global environment; how business processes and functions are supported by information systems, and the roles and responsibilities of people within organizations.
- a2. The impact of current and emerging information and communication technologies on the development and management of information systems.
- a3. The alignment of business strategies and information systems strategies; how information systems support decision-making, and their strategic importance for business intelligence.
- a4. The respective capabilities and uses of different information systems across a wide range of organizational and business contexts, and the criteria for evaluating the success of such systems.
- a5. The social, environmental, professional, legal and ethical issues related to the design, management and use of information systems.

Cognitive skills: On completion of this program the student will be able to:

- b1. Apply analytical skills to the solution of computer-based Information Systems.
- b2. Demonstrate analytical and critical thinking skills in solving business problems and approaching research problems.
- b3. Use research skills and appropriate research methodologies successfully, and be able to synthesize and evaluate information from a variety of sources.
- b4. Apply mathematical and numeracy skills appropriate to the development and deployment of business information systems.

Practical skills: On completion of the program the student will be able to:

- c1. Apply a range of technical skills in information management and systems development in various business environments.
- c2. Use appropriate methods, techniques and tools for generating information systems in response to specific business problems, and according to specific needs and requirements.
- c3. Select, use and critically evaluate appropriate methods and techniques at each stage of the system development lifecycle.
- c4. Critically assess the feasibility and risks of business information systems development in relation to different domains, organizational needs and project management practices.
- c5. Plan, manage and report on, complex projects related to the development of business information systems.

General and Transferable Skills: On completion of this program the student will be able to:

- d1. Work effectively as a member of an

information system development team.

d2. Communicate effectively in a range of settings, and to different stakeholders, through writing and oral presentations

d3. Demonstrate appropriate management and team-working skills, including decision-making, participating in projects, working in multi-disciplinary teams and responding to diverse stakeholder requirements

d4. Demonstrate the ability of the independent learning and continuous professional development.

Career Opportunities

B. Sc. Degree in computing opens the door to a career in computing wherever data, systems, digital, mobile or network systems are involved. Some graduates may progress onto master and doctorate programs. While others may prefer to have jobs with governmental agencies or companies. Below are just a few examples of the types of jobs that you could pursue after graduating with us:

Applications Developer

As an applications developer your role will include writing specifications and designing, building, testing, implementing and sometimes supporting applications using computer languages and development tools. You may also specialize in a specific development environment, such as computer games or e-commerce, and will have in-depth knowledge of a few relevant computer languages.

ICT Manager

The role of the ICT manager is to ensure that information technology resources are aligned with the organization's mission, corporate goals, and the corporate strategic plan. Your role will include developing, maintaining, facilitating and implementing information frameworks in line with a corporate ICT strategy, supporting policies and defining standards associated with information management.

Network Engineer

A network engineer is responsible for

installing, maintaining and supporting computer communication networks within an organization or between organizations. Your role will be to ensure the smooth operation of communication networks in order to provide maximum performance and availability for users (for example, staff, clients, customers or suppliers).

Software Engineer

Software engineers research, design, test, implement and maintain software systems to meet client or employer needs. In this role you will use a variety of computer programming languages and applications, working in real and virtual teams with other IT professionals, or alone.

Systems Developer

Systems developers test systems, diagnose and fix faults, write diagnostic programs, and design and write code for operating systems and software to ensure that they function more efficiently. In this role you may also create systems in response to technical specifications supplied by an IT analyst, often integrating off-the-shelf software packages into existing systems.

Facilities

FIT offers excellent learning resources. The central library of SU acquires many up-to-date books and journals. The audiovisual section has a considerable amount of learning resources. The policy of the library is to avail all the materials required by students either in printed form or in a digital one observing the IPR law. Moreover, it offers Internet access for on-line search and access to the Egyptian Knowledge Bank (EKB)

In addition to this there are three up-to-date labs dedicated for the students of FIT. Each lab can host up to 30 students.

Halls and teaching classes are shared between faculties. It is worth to mention that all the labs, halls, and teaching classes are equipped with data show, PC, sound system, interactive and smart boards, traditional white boards, screens, air conditioning, ...etc.

Total		12	0	12	18						

Fourth Year & Second Semester (4/2)

Course code	Course Title	Credit hours				Prerequisite	Examination Marks*				Exam Time (hrs)
		L	P	T	Total		CW	Oral/p	F.E	Total marks	
ISD 451	Information System Fundamentals	2	0	2	3	ISD 242 Database System	40	-	60	100	3
ISD 452	Information System Analysis & Design	3	0	2	3	ISD 100 Introduction to Systems & Informatics	40	-	60	100	3
ISD 458	e-Business System Fundamentals	2	0	2	3	ISD 220 Introduction to Operations Research	40	-	60	100	3
ISD 425	Network Optimization	2	0	2	3	INT 232 Computer Network	40	-	60	100	3
ISD 4223	Selected Topic in ISD	2	0	2	3	No Prerequisite	40	-	60	100	3
ISD 4215	ISD Project (2)	2	0	2	3	No Prerequisite	40	-	60	100	3
Total		13	0	12	18						

L= lecture, P= practical, T=tutorial, CW= Course work, T.E =Term exams, F.E =Final

Departments

FIT has three academic departments: Computer Science and Software Engineering (CSSE), Information Technology (IT), and, Information and decision Support Systems (IDSS). CSSE tends to be relatively broad and with an emphasis on the underlying science aspects. While IDSS is essentially concerned with computing and information in an organizational context, typically in businesses. IT focuses on computing infrastructure and needs of individual users; tends to involve a study of system.

Training Opportunities

FIT encourages students to apply for summer training when they are in the third year. Although this is not obligatory, students are supported in terms of the searching for a placement, preparation of CVs, interview technique and similar things.
